

1 Example 001

First we assign variables:

```
> x <- 5  
> y <- 7
```

Let's do some multiplication:

```
> x * y  
[1] 35
```

Let's make a graph:

```
> pdf( " 0700d590-c1bb-435c-8000-c90549a8ecd8.pdf" , width=4, height=4)  
> plot(c(1,2,3), pch=19, col= " purple" )  
> dev.off()  
null device  
      1
```

Here is the graph:

2 Example 002

```
data(iris)
library(xtable)
x <- xtable(iris[1:10,])
print(x, file= " dexy--iris-table.tex" )
```

Here is some iris data:

2	4.90	3.00	1.40	0.20	setosa
3	4.70	3.20	1.30	0.20	setosa
